

Firebreak

PROTECTION SYSTEMS, INC.

Installed Wildfire Protection System

The power to protect. Before it's too late.

Wildfires can strike quickly and without warning. But during a disaster, local officials cannot reach everyone immediately and help may not arrive in time to protect your property. The best way to ensure your property gets the protection it deserves is by taking action yourself, before disaster strikes.

Our installed systems work by applying Phos-Chek long term fire retardant with convenient, self-contained spray systems activated manually or automatically. Once applied, the fire retardant (the same powerful solution used by the U.S. Forest Service) will continue to protect your property until it is heavily rained on (1/4 inch) or washed off.

- *Operates with Phos-Chek long term fire retardant, the same product used by the US Forest Service
- *Installed systems can spray the perimeter of your property automatically if a fire is detected
- *Self contained: No electricity or running water required
- *We offer a variety of systems designed to accommodate the needs of individual home and property owners or those of entire communities
- *Please contact us for a custom proposal
