

Firebreak

PROTECTION SYSTEMS, INC.

The power to protect. Before it's too late.

The Firebreak Trailer Wildfire Protection System offers the same fire protection as the fire retardant dropped from airplanes to contain wildfires, but at a scale and portability suitable for large property owners. These include residential, commercial, ranches, resorts, and farms.

This system consists of a 550 gallon tank and pump specifically designed to spray liquid Phos-Chek LC-95W long-term fire retardant. This fire retardant is designed to be applied as a **pre-treatment** by spraying dry grasses, brush, or other woody material at the beginning of fire season. Phos-Chek LC-95W is a long-term retardant that will remain effective until it is washed off by rain or sprinklers. Thus, while the weather stays dry, the retardant remains effective.

- *Spray the perimeter of your property at the beginning of fire season for long term protection
- *Operates with Phos-Chek long term fire retardant, the same product used by the US Forest Service
- *The powerful pump is gas operated and sprays 106 gpm @ 106 psi
- *Powerful pump can spray brush as far as 50ft away
- *550 gallon unit holds enough long term fire retardant to cover 3200 linear feet per tank
- *Dimensions 13' 2" L x 80" W x 53.25" H
- *Unit weight 1325lbs empty
